

# Weight table for chrysanthemums

The following tables can be helpful when determining the grading code for the weight of chrysanthemums. We recommend weighing several boxes to ascertain the correct grading code. The tables assume a weight of an empty box (packaging code 519) being 1.6 kg on average.

The tables are merely a tool to help meet the grading criteria given in the VBN product specifications. Use of the tables is not required, and no rights can be derived from them.

## SPRAY CHRYSANTHEMUM

grading code weight	weight of box with chrysanthemums (kg incl. box) for:	
	80 stems per box	120 stems per box
25		4.6
